

Hüsnüye Tanşa

Backend-focused Software Engineer with a degree in Computer Engineering, experienced in building scalable and data-intensive systems using PHP (Laravel), MySQL, and Redis. Skilled in designing modular backend architectures, developing RESTful APIs, and optimizing high-volume data workflows.

Strong focus on clean code, performance, and maintainable system design, with hands-on experience in multi-tenant B2B platforms and end-to-end module development. Proven ability to work across the full development lifecycle, from requirements analysis to deployment, in collaborative and agile environments.

Education

Bachelors Degree Computer Engineering

Istanbul University Cerrahpasa

2018 - 2023

During my academic studies, built a broad technical foundation by working on projects across multiple domains including full-stack development, IoT, cybersecurity, and image processing, enhancing analytical thinking and problem-solving skills.

Experience

MAP Data Services

Software Engineer

Contributed to the development of a scalable, multi-tenant B2B SaaS platform, focusing on backend architecture, high-volume data processing, and API-driven integrations using Laravel, MySQL, and Redis.

- Developed and maintained scalable, multi-tenant B2B backend systems using PHP (Laravel), MySQL, and Redis, following SOLID principles and modular monolith architecture.
- Contributed to a multi-tenant SaaS platform (OTOEDI) supporting multiple organizations (customers and suppliers) with role-based workflows and tenant-aware data isolation.
- Delivered core enterprise modules including SRM, Supplier Performance Evaluation, 8D Quality Management, LLS, and Warranty Return systems with KPI-based logic, validation workflows, and dynamic dashboards.
- Designed and implemented scalable RESTful APIs with secure endpoint structures, validation layers, and background job processing.
- Implemented unit and feature tests using PHPUnit to improve code reliability and maintainability.
- Built data processing pipelines for large-scale inbound data, including PDF order parsing, normalization, and validation using Python and PHP.
- Developed API-based automation systems including webhook integrations, event-driven workflows, and external service integrations.
- Optimized complex SQL queries and indexing strategies, significantly improving performance of high-volume and data-intensive systems.
- Implemented Redis-based caching strategies to reduce database load and improve response times in high-traffic dashboard systems.
- Designed and implemented asynchronous processing systems using RabbitMQ, enabling scalable background job handling.
- Refactored legacy codebases into modern OOP architectures, focusing on static analysis compatibility and automated code quality standards.
- Owned end-to-end module development, from requirements analysis and system design to implementation, testing, and deployment.
- Established centralized logging and monitoring systems to improve production issue detection and debugging efficiency.
- Managed multi-environment setups (development, QA, staging, production) and contributed to CI/CD pipelines and deployment workflows.
- Produced technical documentation including API specifications, data models, authentication flows, and release reports.
- Contributed to C++-based data processing tools and supported build and deployment workflows.
- Configured server-level settings including domain routing, secure access rules, and third-party integrations.
- Collaborated with cross-functional teams including product owners and stakeholders to deliver new features and improve existing systems.

07/2022 – Present

 Istanbul, Türkiye

Skills

- Programming Languages
 - PHP (OOP, PHP 8.x), JavaScript (ES6+)
 - Python (data processing), C++ (algorithms, academic projects)
- Backend & Frameworks
 - Laravel (modular architecture, RESTful APIs, service layers), PHP (custom MVC), Node.js
- Architecture & Design
 - Modular Architecture, Domain-Driven Design (DDD) patterns including Entities, Repositories, Services, and DTOs., RESTful API Design, Caching Strategies, Asynchronous Processing (RabbitMQ)
- Database & Data Technologies
 - MySQL, PostgreSQL, SQL Server
 - Advanced SQL (query optimization, indexing, views, stored procedures, triggers)
- Caching & Messaging
 - Redis (caching strategies, data store), RabbitMQ (queue-based asynchronous processing)
- Cloud & DevOps
 - Docker, AWS (EC2 – basic server setup, deployment, and database integration), CI/CD pipelines, Linux environments
- Web & Frontend
 - React, HTML5, CSS3, Bootstrap, jQuery, AJAX
- Data Processing & Integration
 - High-volume data processing, EDI/XML/VDA transformations, PDF parsing pipelines, API integrations, data normalization
- Tools & Platforms
 - Git, GitHub, Postman, VS Code, npm
- AI-Assisted Development
 - Claude Code, GitHub Copilot (code generation, debugging, refactoring) with validation of outputs

- <https://github.com/ht1625>

Languages

- English
 - Intermediate (confident reading, writing & communication)

12/2021 – 06/2022

Full Stack Engineer Juniour

Digital Trade INC.

- Worked on a live e-commerce platform with Laravel, PHP, MySQL, HTML/CSS, Bootstrap and AJAX.
- Implemented a secure payment flow and an admin panel for product/order/user management.
- Integrated a pass panel for ticket/barcode tracking and added a blog module to support user communication and engagement.

08/2021 – 09/2021

Frontend & Backend Developer

TGS Elektronik Ltd. Co.

- Contributed to the development of an e-commerce platform for vehicle parts (batteries, wheels, tires).
- Built responsive and interactive UI features using HTML, Bootstrap, JavaScript and AJAX.
- Supported backend development with PHP and MSSQL, contributing to core product and shopping flows.

07/2021 – 08/2021

IDS Project Developer

ISTECENTER

Deployed SCADA honeypots on Google Cloud to capture active exploits, analyzed attack traffic on Ubuntu systems, and developed IDS rules published on ISTECS's GitHub with comprehensive security reports.

10/2020 – 11/2021

İÜC İEEE CS-Web Team

İÜC İEEE Student Branch

Built a dictionary-style web platform similar to Ekşi Sözlük/Urban Dictionary within the univercity club.

Used CodeIgniter (MVC) + MySQL for backend and HTML/CSS/Bootstrap + JavaScript/Ajax for a responsive, interactive UI.
